Playgrounds that nurture children's

Manufactured in the heart of Europe in the heart of Europe,
appreciated by architects, planners,
and communities across the globe.

Welcome to a world where play and children's development go hand in hand!

The Treflik family and Buglo playgrounds are dedicated to fostering the all-round development of young children through joy and collaboration.

Fun is an essential part of childhood, bringing not only joy but also playing a key role in supporting well-rounded development. Whether it's playing on the playground or watching cartoons, we strive to ensure that every moment is an opportunity for learning and growth for children.

Buglo's mission

is to create playgrounds that not only inspire play but also offer a range of benefits for a child's development.

The Treflik family

takes young children on an exciting journey through the world of emotions and social relationships with carefully crafted cartoons..

Podręcznikarnia

on the other hand, delivers all of these values directly to educational

We show how to be eco-friendly

Ecology is one of the many values that connect the philosophy of Buglo and the Treflik family. That's why, when creating the Treflik Family line, we based it on our Recycling series.

The collection uses eco-friendly materials sourced from post-consumer recycling and sustainable farming. By incorporating these materials into production, we help reduce the incineration and landfill of plastic waste while supporting the development of new recycling technologies. Waste is given a second life, becoming a source of joy for the youngest.

Biopolymers in the rotomoulding process

50%
sugarcane
material

50% of this material is made from sugarcane (during growth, sugarcane absorbs CO₂, reducing carbon levels in the atmosphere).

Using biopolymers will reduce the carbon footprint and improve the reference environment.

It is fully recyclable.

Wall boards from recycling

-76%
smaller carbon
footprint*

Multilayer sheets manufactured from reclaimed and recycled marine waste, such as fishing nets, ropes, and trawls.
UV resistant

* per kilogram of waste recovered

-86%
smaller carbon
footprint*

Recycled steel

Manufacturing one ton of steel from scrap leads to a reduction in energy consumption of up to 84%. Recycling steel saves 40% of water, and significantly reduces air (by 86%) and water (by 76%) emissions.

Steel structures are much more environmentally friendly than, for example, structures made of reinforced concrete

Metal recovery for steel objects is a minimum of 80%.

Did you know...

Each element of our playgrounds, just like every episode of the Treflik family, undergoes thorough testing and expert consultations to ensure they are safe and suitable for children

The slide

Under the watchful eyes of the Trefliks, helps young children develop courage and confidence.

Spaces that spark imagination, ready for endless possibilities.

Educational boards

Surrounding the sandbox, the educational boards are a real treat for little explorers. They allow children to learn in an interactive and fun way, while developing cognitive, language, and mathematical skills.

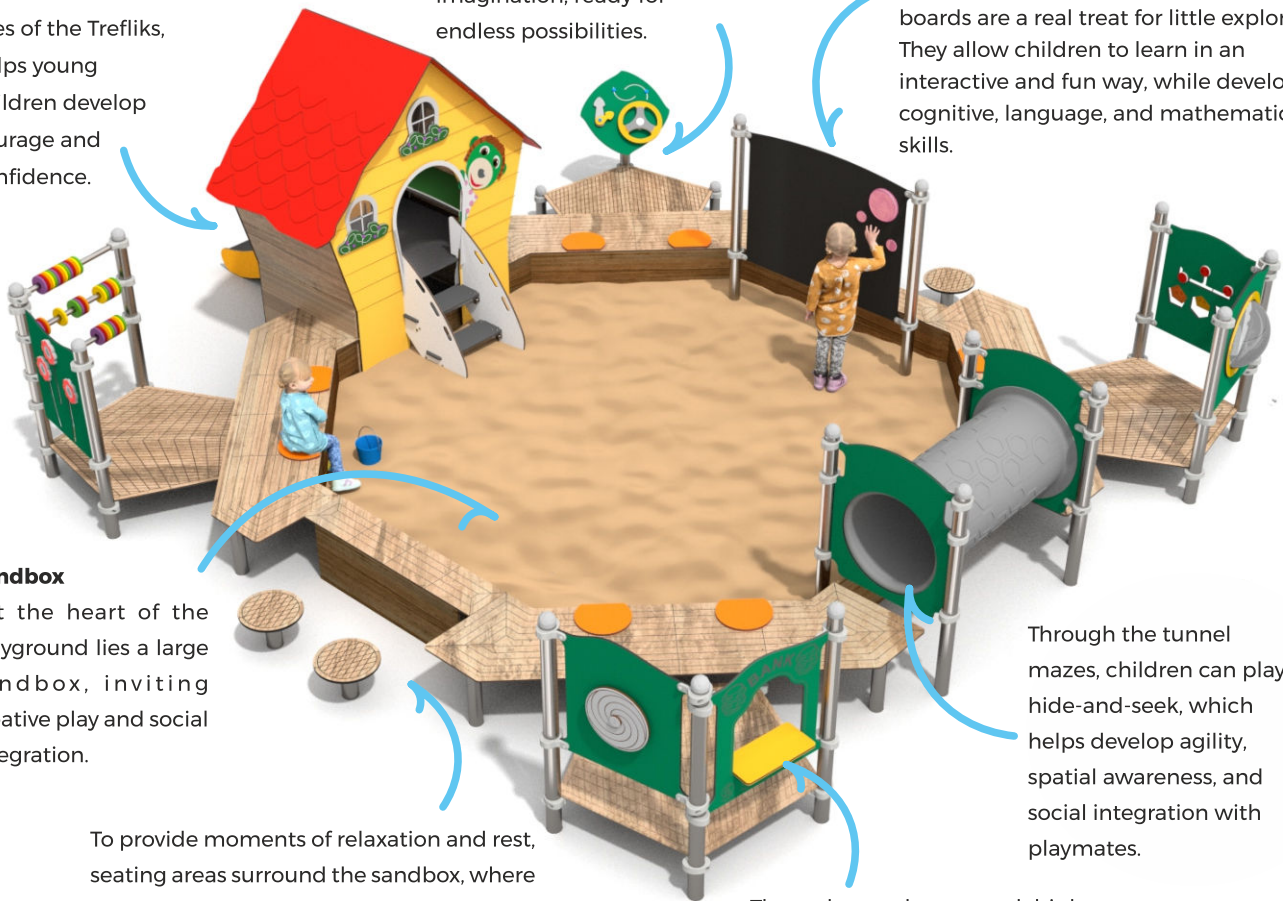

Sandbox

At the heart of the playground lies a large sandbox, inviting creative play and social integration.

To provide moments of relaxation and rest, seating areas surround the sandbox, where children can take a break, admire their creations, or simply enjoy the company of their friends.

Through the tunnel mazes, children can play hide-and-seek, which helps develop agility, spatial awareness, and social integration with playmates.

The colour scheme and high-quality materials have a positive impact on the child's well-being.

Activities that support development

Sliding

Socialising

Climbing

Jumping

Balancing

Sensory integration

Sliding down

Swinging

Swinging on swings

Spinning

Sand play

Educational boards

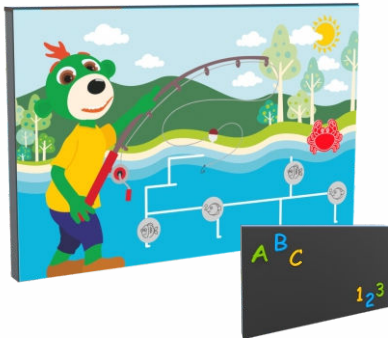

When designing playgrounds for preschoolers, we focus on details that support the children's full development. That's why, in our Treflik-themed designs, we incorporate features such as placing the alphabet on the side of the slide, numbers on the steps, and a clock with hands. Our goal is to create a space where play not only brings joy but also encourages the development of new skills, socialisation, and discovering the world.

THE Treflik
FAMILY

Treflik
FAMILY

Springers

are an essential feature of every playground. They can take any form – a vehicle, an animal, or anything that sparks the imagination. Additionally, they are excellent for developing motor skills and coordination, providing children with plenty of joy and health benefits.

Playhouses

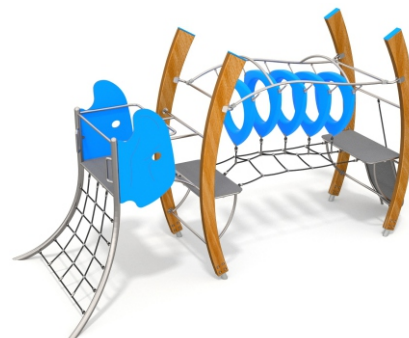

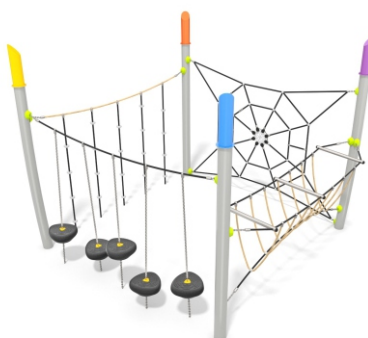

play on these devices is a true feast for the imagination! A playhouse can transform into a mechanical workshop, a farm, or even a Wild West tavern.

Playhouses

Rope structures

Rope structures equipment designed for children who love climbing. Climbing not only strengthens the grip, which is essential for learning to write and other manual skills, but also improves balance and motor coordination.

Trampolines

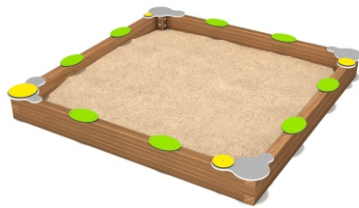

Jumping on them isn't just great fun; it also has a positive impact on the body and joint health. It improves motor skills, strengthens muscles, and makes for an activity that's both enjoyable and beneficial for the body.

Trampolines

Sandboxes

are classic play areas where children can develop their imagination and fine motor skills. Playing with sand encourages social interaction and offers one of the best and simplest forms of entertainment, blending learning with fun.
